

Book List API

Project Brief

This project uses Express to create a book list API.

Your Project

The book list app should contain the following functionality:

1. The ability to add books to the list.
2. Each book listing should include the following:
 - a. Title
 - b. Author
 - c. Read/Not read status
 - d. An ID
3. The ability to remove books from the list.
4. The ability to edit book listings.
5. The ability to return book listings
6. The ability to return books by ID
7. The ability to delete books by ID

Deliverables

The address for the deployed App.

The GitHub repository address.

Extension

Add extra functionality to the book list API (maybe adding the link to the book on amazon or review/storyline information about the book)

Add additional functionality such as find book by title, or books by a specified author.
